

## WHAT'S WRONG WITH PRESENT-DAY MEDICINE

Henry H. Bauer, hhbauer@vt.edu; updated 17 April 2017

This bibliography is not exhaustive but it is representative. It covers the salient points and is updated periodically. It lists only substantive, well documented items.

Since later works usually reference earlier relevant ones, reading might start with David Healy's comprehensive 2012 *Pharmageddon*. Carl Elliott's *White Coat, Black Hat* offers insights by a bioethicist that are not duplicated in most other works. Greene's *Prescribing by Numbers* is a key historical account. On psychiatry, Whitaker's books are comprehensive and very readable, as is Greenberg's 2013 *Book of Woe*. But there is also much worthwhile material in the other listed books, articles, reports, and links.
